

Project Vulcan

The Vulcans had to embrace logic as way of life to survive because their emotions were destroying them.

- **Discussions in scale:** Logic based collaboration and social media app with AI engine to help us connect better
- **Currently Proof of Concept** – 1st demo – looking for early participants dedicated to the principles
 - <https://www.thesortition.com/>

The Problem

- Virtually impossible to have conversations and discussions in scale (i.e. with more than a few people)
 - Current Social Media is not the solution – encourages shouting, fake news, disrespectful environments, lack of focus, wasting time
 - There are some examples of better cooperation
- Current Social Media promotes propaganda - discussions in a somewhat respectful political environment have degraded into a worse Media Circus than ever. Clearly an existential threat to our society.
- The World is increasingly driven by Technology, the solution must include Technology integrated SMARTLY with human processes. This is also CRYSTAL CLEAR in the corporate world.
- Solutions aren't clear, but a strong place to start and focus is to include the development of a scalable app and processes that will attract those who want to pioneer the combination of AI + logic in scale

The Sortition is currently a Proof of Concept App

1. Enter a topic
2. Have AI first create a map of distinct viewpoints (from the Net) organized as
 - Subtopics
 - Viewpoints
3. Each user enters freeform text with their opinion, AI will overlay your opinion on the map and indicate if you have new viewpoints to add
4. You can enter how strongly you agree / disagree with the various viewpoints mapped
5. You can see other people's viewpoints, averages
6. You can make comments on your viewpoints and other's viewpoints

Current Status

- Very first early stage Proof of Concept – limited UX and features, but get feedback on the concept and the possibilities
- Brainstorm on
 - How it can be used initially and by whom
 - Important features
- Start with very small select group of people who are dedicated to the concept, and develop it further and roll it out slowly to the appropriate group of people, then hopefully eventually to the public
- Opportunities to demonstrate to several politicians and others. Also consider others such as Universities, Focused Business Use Cases
- Maria did all the implementation, but eventually she'll need help to scale it up
